Dear Friends and Customers:

As we prepare to go into our 48th year in the nursery business, we wish to again assure you all of our deep appreciation of the splendid co-operation and support you have given us through the years. Our customers and friends have helped us grow from a field of thirty acres into one of the country's largest. For this we are grateful.

We claim to have America's Most Diversified Nursery. All items in this book you may find growing on our grounds here at Middlebury, Indiana. Other nurserymen have told us that we grow the most complete and diversified line of nursery stock in America.

As we start this new year we are in a war for the survival of Free Men and Free Institutions. Shipping facilities are being taxed to their utmost capacity to keep war supplies and food shipments moving. We anticipate no great difficulty in getting your orders to you, but there may be unavoidable delays in deliveries. Please be considerate if these situations arise. We will do all that is humanly possible to get your orders to you when you want them, but believe all of us agree that vital war materials come first and we must be prepared to be considerate of unavoidable delays.

Yours for a More Beautiful, Free, Peacetime America,

Why Not Grow More and Better Vegetables, Flowers and Lawns?

Now — The New "VITAMIST" Method

"Vitamize as You Sprinkle" is the new, efficient, easy-to-use method that is revolutionizing plant stimulation and promoting plant growth. A small Vitamin Cartridge does the trick. Simply remove the nozzle from your hose, drop a VITAMIST Cartridge into the hose, replace the nozzle, turn on the water, adjusted to a fine spray, and sprinkle the Vitamin over any part of your lawn and garden. One Cartridge will vitamize about 1500 square feet (a space about 30 x 50 feet). Usually it takes about six minutes to dissolve the entire Cartridge. After the VITAMIST has been applied, water the ground thoroughly for a few minutes in order to wash the Vitamin off the leaves and blades of grass into the soil. This will bring it in contact with the roots of the plants where it activates and stimulates their growth. Apply the Vitamin once a week.

Luxuriant Lawns and Gardens

THIS NEW EASY WAY

VITAMIST

VITAMIZE AS YOU SPRINKLE

NEW—simple, easy, quick way to VITAMIZE your entire lawn and garden. Assure yourself of gorgeous, luxuriant flowers and a beautiful, attractive lawn that will be the envy of your friends and neighbors.

NO FUSS—NO MESS—NO BOTHER

Simply remove the nozzle from your garden hose, drop a VITAMIST Cartridge into the hose, replace the nozzle and turn on the water. NOTHING ELSE LIKE IT. One Cartridge will VITAMIZE 1,500 square feet.

"HOW TO GROW ROSES"

Consider these simple instructions and you will have little difficulty in growing beautiful Roses. Sunny location so that it gets sunshine at least part of the day. The soil should be clean and mellow with fertilizer well worked in, rotted manure being best. The plants should be unpacked as soon as they are received, and planted. If you are unable to plant immediately upon receiving them, they should be heeled in (buried), in moist dirt until you are ready to plant. Never allow to stand and dry out. In planting, set the plants so that the bud, or joint, above the roots is about one inch below the surface of the ground. The holes should be dug large enough so that the roots may be spread out naturally. Make sure that all the fibrous roots are firmly packed by shifting and tamping. Be sure to thoroughly soak the fresh planting, and never allow it to dry out or the soil to cake. After planting and wetting, mound up the soil four or five inches high around each plant. Cut off all the branches about an inch above the ground, leaving it this way for ten days or two weeks or until the buds start to show. The soil can then be leveled off. Roses that are handled in this manner rarely fail to grow. If Roses are planted with the tops left exposed to the drying winds they will shrivel and die before they start to grow. Allow 18 to 24 inches of space between plants.

**Provides Some of the Earliest Masses of White Flowers,
First of May**

Bloom clusters resemble the Lilac in shape and are lovely for cutting. May be left in bush form for the border or trimmed up and grown as a specimen tree for the lawn. Flowers are followed by small fruits which are edible. Birds delight in them and come flocking to the tree. Grows rapidly, is perfectly hardy anywhere, and we heartily recommend it to those of you who are looking for something new and different for your grounds.

May Day Tree is a native of the cold rugged plains of Siberia. Prof. Hansen, father of the Bush Cherry (see page 69), has greatly improved and developed the May Day Tree for the Dakotas and colder regions of this country. Thus it is so hardy that it thrives immediately in any section of the country.

Specimen Hardy Boxwood

DWARF HARDY BOXWOOD

**For Dwarf Evergreen Hedges — Ideal
For Edging Beds, Borders, Pools, Etc.**

No doubt you have at various times admired the dwarf Boxwood hedges used so much for garden outlines on large estates. Most of the earlier Boxwood in this country came from England and later was much used in Virginia, New Jersey and other eastern states.

We have grown quite a nice stock of these plants which have proven entirely hardy in Northern Indiana and now offer them to our customers at a reasonable price. In extreme northern sections they should be given some winter protection. **Heavy rooted, 6-year-old, 6 to 8 inch high plants, 45c each, postpaid. 10 for \$3.50; 25 for \$7.50; 100 for \$25.00.**

(Note: For close hedges, plant 6 to 8 inches apart. For bed outlining plant 1 foot apart. Will eventually reach 2 to 3 feet high unless severely sheared and kept low.)

Great New Clematis, "Ramona"

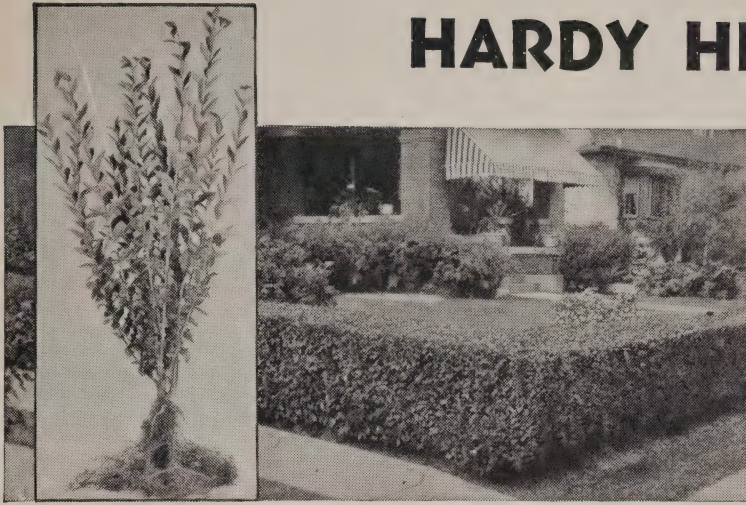

This beautiful Clematis carries a suggestion of lost Indian legend; lingering memories of a vanished race. Large, lavender-blue blooms in profusion. Hardy and easy to grow. Very large, rounded petals. **Only 75c each.**

How to Grow Clematis

Clematis will thrive in almost any climate but for best results they should be planted in a somewhat sunny location and in as near a non-acid soil as possible. If your soil is acid this condition may be remedied by mixing lime with the soil at planting time, or by thoroughly working lime into the soil around those plants already in place. Clematis should be set so that the dirt comes up about 2 inches on the stem above the roots. If planted with the crown just level with the soil they will soon wither and die from drying out. Dig the hole large enough so that the roots may be spread out naturally in planting. If the soil is poor the hole should be filled with good rich garden soil. Clematis planted in this manner and kept well watered (not drowned) will rarely fail to grow and do well.

HARDY HEDGES

Hardy Amoor River Privet Hedge

PLANTING AND GROWING HEDGES

Beautiful hedges are easily grown if a few simple instructions are observed. Dig a trench 10 to 12 inches deep and the width of a spade. Set the plants a couple of inches deeper than they stood in the nursery. This insures a dense hedge at the base. Privet should be set 10 inches apart, Barberry about 18 inches. Shrubs such as Spirea 18 inches, Chinese Elm 2 feet, and Evergreens 2 to 3 feet. Spacing may be varied depending upon the density desired. After spacing plants, fill in about one-half of the depth of the trench, then flood with water. After settling fill in balance of the trench and tramp firmly. Leave a slight depression along each side of the hedge to retain water. Keep thoroughly soaked until well started. Privet should be cut back to about 8 or 10 inches after planting to promote vigorous growth. Hedges planted in this manner rarely fail to grow.

HARDY AMOOR RIVER PRIVET

Most universally planted of all hedges. Shiny dark green leaves, not subject to blight or disease. Very hardy, a rapid grower. May be sheared any shape. Plant 10 in. apart and prune back to 8 or 10 in. after planting for a dense, hardy hedge. 2-yr., 18- to 24-inch, well branched, 25 for \$1.75; 100 for \$6.00, by Express. 2-yr., 12- to 15-inch, \$4.00 per 100.

Columnberry

12 of the WORLD'S BEST VARIETIES of HARDY PHLOX

2-YR. FIELD-GROWN ROOTS WHICH WILL BLOOM THIS YEAR

Hardy Phlox are becoming one of America's most widely planted perennial plants. They are perfectly hardy, start blooming in midsummer and continue until frost. New introductions have added rare new colors and improved blooming habits.

We are one of America's largest growers of Hardy Phlox. The soil of Northern Indiana is ideal for their propagation and our plants grow and bloom profusely. We constantly add new introductions to our list as fast as they prove themselves satisfactory. The twelve varieties shown on these pages we believe to be the outstanding ones grown today. Their color range is unexcelled, all are hardy and have proved to have the excellent blooming habits of long season, large flower heads and large individual florets. Plant Krider's Hardy Phlox. Use them in beds, borders and mass plantings.

Do Not Allow Your Phlox to Go to Seed

Keep blooms cut as they open. If you permit plants to go to seed they will drop hundreds of seeds right around the base of the plant. Next year masses of seedlings will spring up. These usually have the old fashioned color and soon kill your true variety. This soon makes the bed a mass of seedlings.

Special PHLOX Collection

The twelve varieties which we offer on this page we believe to be the twelve best varieties grown today. They are hardy, many are proven new varieties, their colorings are the finest produced and they will give you satisfaction and pleasure wherever planted.

Over the years I have received many plants from you and they always do so well for me, which attests to the high quality that you maintain in growing your many plants.

Thank you again for your nice treatment and wish you continued success. Yours truly, C. N.

THE QUALITY OF STRAWBERRY PLANTS

In looking through the many catalogs you receive you will notice that many claim to be the largest growers of plants, many claim to grow the best plants. We have bought plants from some that make extravagant claims in different sections of the country and we may truthfully say that we have never received any better plants than those we send out to our customers. We guarantee the plants we grow and sell to be as large and as fine as you get anywhere (no matter what you pay) and to be put up in as good condition. If grown side by side, under like conditions, they will produce as much and as good fruit.

Early Varieties

ROCHESTER. (Freestone.) Early midseason. Color lemon-yellow changing to orange-yellow, blushed with deep red. Skin, thick and tough. Yellow flesh stained with red near the pit. Very juicy, tender and melting, sweet and highly flavored. Splendid quality.

GOLDEN JUBILEE. (Freestone.) A choice freestone recently introduced by the New Jersey Experiment Station, already popularized and given a high rating. Tree habits and fruit resemble Elberta. The skin is yellow with red blush; flesh golden yellow; tender and sweet.

ORIOLE. (Freestone.) Yellow peach of first quality, recently introduced in the East. Bore its first crop here the past season.

Midseason Varieties

CHAMPION. (Freestone.) Large, round, quite regular, yellowish white, mottled with red on sunny side, flesh white with red at the pit; one of the best in quality. For nearby markets and home use; it is a healthy grower and hardy in fruit bud. The fruit ripens from 20th of August.

ELBERTA. (Freestone.) The great market peach. Perfectly hardy in the North. Many consider it the best all-around peach; lemon-yellow color with blush on sunny side. Flesh pale yellow, tender and juicy. Tree vigorous. An excellent shipping peach. September.

GOLD DROP. (Freestone.) The almost translucent golden colored flesh of this peach renders it exceedingly attractive in market, where it sells at highest prices. The tree is hardy and bears early; profitable. Late September.

HALE-HAVEN. (Freestone.) In this new, hardy, rot-proof peach, almost as large and fine as the Elberta itself, we have a peach of great market value, a large, roundish peach, with yellow skin, red blush on sunny side, yellow flesh; tender and melting; rich, sweet, and of superior flavor. A big, early yellow-skinned peach of high quality, is sure to be in great demand. September 1st.

J. H. HALE. (Freestone.) Fruit averages one-third to one-half larger than Elberta, ripens about 5 days earlier and is superior in flavor. Color, a beautiful golden yellow with deep carmine blush. Does well over a wide range of territory and worth cultivation. September 1st.

SOUTH HAVEN. (Freestone.) The great hardy peach for cold regions because it stands 10 degrees colder weather than any other peach grown. Large yellow freestone, as large as Elberta and a week earlier on the market. Of all peaches for Indiana markets this rules supreme. Plant Elberta and J. H. Hale with it for commercial purposes. All yellow, all freestone, all money-makers.
